VILLUPURAM, TAMIL NADU EST. 2012

Rooted in Purpose & Regenerative Agriculture

Organizing farming communities around low-water vetriver to build resilient livelihoods and prevent soil erosion.

OUR STORY - PAGE 2

About KH International

Founded in 2012 in Villupuram, Tamil Nadu, KH International began with a simple conviction: that vetriver — a hardy, unglamorous grass most farmers overlooked — could become the foundation of a fairer, more resilient rural economy. Vetriver asks for almost nothing: little water, no chemical dependency, and a root system that holds soil together where erosion would otherwise win. What it gives back, when a farming community is organized around it properly, is a great deal.

What started as a partnership with a handful of local farming families has grown, over more than a decade, into a structured livelihood network. Today, more than 500 women are directly engaged in vetriver farming across our partner network, cultivating over 100 acres of farmland using regenerative, low-water practices. Alongside that farming partnership, we built a second, parallel program around traditional vetriver root craft — more than 400 women artisans handweaving mats, screens, and fragrance products from surplus root, keeping a centuries-old craft tradition alive while creating income that doesn't depend on any single harvest.

From that foundation, KH International now distills export-grade vetriver oil for global perfumery, cosmetics, and wellness markets — currently supplying Canada, and building toward France and the wider European market. Every litre we export carries the same story: a rural economy built on women's livelihoods and regenerative farming, not extracted from it.

Why India, Why KH International

PILLAR 01

Supply security, not just an alternative source

Global perfumery has depended on a small number of source regions for vetiver — principally Haiti, Java, and Réunion — and that concentration has become a real vulnerability. Haiti's political and economic instability in particular has repeatedly disrupted supply in recent years. KH International offers what the market currently lacks: a scalable, traceable, quality-consistent source outside that fragile supply concentration.

PILLAR 02

Regenerative by nature, not by marketing claim

Vetiver is one of the few crops where sustainability and commercial quality point in the same direction. It requires minimal irrigation, tolerates drought, and its root system actively prevents soil erosion — every acre under our cultivation is land that improves rather than depletes while it produces.

PILLAR 03

Full traceability & field-level documentation

Because we manage the relationship with our farmer partners directly — from seedling quality and soil testing through to harvest timing — we can tell you exactly which fields, which season, and which harvest any given batch of oil came from. That traceability is increasingly a requirement for European buyers, not a nice-to-have.

Sustainability & Farmer Partnerships

Two distinct, countable livelihood programs in Tamil Nadu — providing direct traceability and audited ESG impact for global trade partners.

PROGRAM 01

The Farming Partnership Program

900+ Women

100+ Acres

Every litre of KH International vetriver oil is connected to a farmer partnership, not an anonymous commodity purchase. We provide our partner farmers with quality seedlings, soil testing, and cultivation guidance — and in return, we secure a stable, quality-controlled supply of mature root, harvested at the right time for optimal oil yield. Today, more than 500 women farm vetriver across more than 100 acres of partner land under this program — earning stable income from a crop that restores the soil it grows in, rather than depleting it.

PROGRAM 02

The Vetriver Craft Program

400+ Women

Not every part of the harvest goes to distillation. Alongside oil production, we run a parallel livelihood program built around traditional vetriver root craft — more than 400 women artisans handweaving root into mats, screens, and fragrance products using techniques passed down for generations. This program gives artisan families income that doesn't depend on the oil market alone, and keeps a genuinely traditional craft economically alive rather than letting it fade out.

900+ Women's Livelihoods Supported

Together, these two programs put KH International's direct impact at over 900 women's livelihoods — a real, specific number worth stating plainly rather than folding into vaguer "community impact" language. This is a genuine commercial asset for a French buyer, not just a values statement: European due-diligence and sourcing-transparency expectations, and buyers' own downstream ESG reporting needs, make a documented, numbered impact story a real differentiator rather than a nice-to-have.
